GastroMend[®]XC

RESOLVE | RECOVER | RESTORE

NEW FORMULA

with Chitosan + Beta-Carotene.

Trailblazers in finding drug-free solutions to common horse health problems, SynNutra, Inc. is proud to announce its latest revolution in ulcer care, **GastroMend[®]XC**.

- Reduce Pain
- Improve Appetite
- Maximize Nutrient Absorption

Equine Gastric Ulcer Syndrome is a surprisingly common, painful condition known to afflict any number of breeds at different ages in a variety of environments. Stress-related and potentially devastating, ulcers trigger obvious imbalances in horses' weight and hair coat, result in poor performance, and can even cause unpleasant changes in behavior and temperament.

THE INNOVATION

Unlike the usual acid-reducing drugs and coating agents, **GastroMend[®]XC** is a dietary supplement made with plant extracts and other naturally active ingredients to promote ulcer healing.

THE PROOF

Once described as 'the fountain of life', Centella Asiatica, (also known as Gotu Kola) is a tropical flowering plant used for centuries in Chinese traditional medicine, and is thought to decrease inflammation and increase collagen production to help rebuild healthy tissue.

Boasting powerful antibacterial properties, Chitosan is a form of glucosamine that steps up healing and contributes to cell proliferation, and further increases collagen synthesis for tissue structure and vitality.

A precursor to vitamin A, Beta-Carotene is a powerful antioxidant that protects the body from free radical cell damage to help strengthen tissue.
